## **BEST AVAILABLE IMAGES**

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

## IMAGES ARE BEST AVAILABLE COPY.

As rescanning documents will not correct images, please do not report the images to the Image Problems Mailbox.

New staphylokinase mutants with reduced immunogenicity - useful for treating arterial thrombosis

Disclosure; Page 16; 21pp; English.

Staphylokinase derivatives showing a reduced immunogenicity as compared to wild-type staphylokinase are claimed. The derivatives are useful as thrombolytic agents to treat arterial thrombosis and are pref. produced by eliminating at least one of the epitopes indicated in the features table. The epitopes are destroyed by replacing one or more amino acid residues in a charge cluster by an Ala residue. Mutations are introduced using site-directed mutagenesis on wild-type staphylokinase genomic DNA from the S.aureus lysogenic strain SakSTAR. The present sequence is that of wild-type SakSTAR staphylokinase.

The derivatives are useful as thrombolytic agents to treat arterial thrombosis and indicated in the features table. The epitopes replacing one or more amino acid residues in a charge cluster by a hia residue. Mutations are introduced using site-directed mutagenesis on wild-type staphylokinase genomic DNA from that of wild-type staphylokinase genomic DNA from that of wild-type sakSTAR staphylokinase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         06-JAN-1995;

Staphylokinase is used as a cc potent thrombolytic agent in patients with acute myocardial infarction. Cc The method is useful for reducing cell based immunogenicity of non-human cc other species, for diagnostics and treatment of human disease. AAB99400 cc other present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Q

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            increasing stability of a polypeptide of interest. The method comprises (a) expressing a diversified population of nucleotide sequences encoding a polypeptide of interest; (b) screening the polypeptides expressed for function, immunogenicity and/or stability; and (c) selecting functional polypeptides with altered immunogenicity and/or increased stability. The method is used to improve the properties of polypeptides, in particular to alter the immunogenicity and/or increase the functional in vivo halfilfe of the polypeptide. The method uses a high throughput system that makes it possible to search several orders of magnitude more polypeptides than is possible by previously known approaches. This enhances the chance of finding the optimal variant from the many thousands of variants that may be produced. The present sequence represents S. aureus staphylokinase variant sequence, used to exemplify the method of the invention.

                                                                                                                                                                                                                                                                                                                                            DNA encoding SAK lacking the signal peptide, is expressed intracellularly. This avoids the problem of fast degradation of polypeptides or destruction of the host when expressed into the medium or into the periplasm respectively. High expression is possible and the chemically induced overprodn. is easy to handle
                                                                                                                                                                                                                                                                                                                                                                                                                     Staphylo-kinase (SAK) sequences lacking sequences for signal peptide(s) - for prodn. of proteins used as plasminogen activators in thrombosis treatment, and monoclonal antibodies

Staphylokinase derivatives showing a reduced immunogenicity as compared to wild-type staphylokinase are claimed. The derivatives are useful as thrombolytic agents to trant arterial thrombosis and are pref. produced by eliminating at least one of the epitopes indicated in the features table. The epitopes are destroyed by replacing one or more amino acid residues in a charge cluster by ar Ala residue. Mutations are introduced using site-directed mutagenesis on wild-type staphylokinase genomic DNA from the S.aure lysogenic strain SakSTAR. The present sequence is a specific example of a staphylokinase derivative according to the invention; the sequence does not appear in the specification but can be generated by the staphylokinase sequence using the description gives the sequence of the staphylokinase sequence using the description gives the sequence of the staphylokinase sequence using the description gives the sequence of the staphylokinase sequence using the description gives the sequence of the staphylokinase sequence using the description gives the sequence of the staphylokinase sequence using the description gives the sequence of the sequence of the staphylokinase sequence using the description gives the sequence of the sequence of the sequence of the sequence using the description gives the sequence of the sequence of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New staphylokinase derivs. having reduced immunogenicity – useful for treating arterial thrombosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Example 2; Page -; 58pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              in Table 1 of the disclosure.

                                                                                                                                                                                 В
                                                                                                                                                                                                      Ş
                                                                                                                                                                                                                                                                                                     Staphylokinase derivatives showing a reduced immunogenicity as compared to wild-type staphylokinase are claimed. The derivatives are useful as thrombolytic agents to treat arterial thrombosis and are pref. produced by eliminating at least one of the epitopes indicated in the features table. The epitopes are destroyed by creplacing one or more amino acid residues in a charge cluster by an Ala residue. Mutations are introduced using site-directed mutagenesis on wild-type staphylokinase genomic DNA from the S.aureus lysogenic strain SakSTAR. The present sequence is a specific example of a staphylokinase derivative according to the invention; the sequence does not appear in the specification but can be generated from the wild-type staphylokinase sequence using the description given in Table 1 of the disclosure.
                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                   The present sequence is a specifically claimed Staphylokinase SakSTAR C variant. This variant has one aminoacid that has been substituted by another aminoacid that reduces reactivity with monoclonal cantibodies and absorption of SakSTAR-specific antibodies from plasma comparison comparison of SakSTAR-specific antibodies from plasma comparison composition from the staphylokinase derivative and a fibrinolytic potency in human plasma. The new staphylokinase derivatives are used for treatment of arterial thrombosis, especially myocardial infarction. The compositions can be used in human or veterinary practice.

Note: The present sequence is not shown in the specification, but is a fiven in figure 1

This variant has one aminoacid that has been substituted by another aminoacid that reduces the reactivity with monoclonal antibodies and absorption of SakSTAR-specific antibodies from plasma of patients treated with staphylokinase. The derivatives can also be substituted with cysteien modified with PBG to maintain the specific activity and significantly reduce the plasma clearance. They have altered immunogenicity without markedly reducing the specific activity. This sequence has anti-thrombotic, cardiant activity and a fibrinolytic potency in human plasma. The new staphylokinase derivatives are used for treatment of arterial thrombosis, especially myocardial infarction. Note: The present sequence is not shown in the specification, but is

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      IJ
                                                                                                                                                                                for treatment of arterial thrombosis, especially myocardial infarction. The compositions can be used in human or veterinary practice. Note: The present sequence is not shown in the specification, but is
                                                                                                                                                                                                                                                                                  of patients treated with staphylokinase. The derivatives can also be substituted with cysteine modified with PEG to maintain the specific activity and significantly reduce the plasma clearance. They have altered immunogenicity without markedly reducing the specific activity. This sequence has anti-thrombotic, cardiant activity and a fibrinolytic potency in human plasma. The new staphylokinase derivatives are used for treatment of arterial thrombosis, especially myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 7; Page -; 101pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ş
                                                                             The present sequence is a specifically claimed Staphylokinase SakSTAR cvariant. This variant has one aminoacid that has been substituted by another aminoacid that reduces the reactivity with monoclonal continuous and absorption of SakSTAR-specific antibodies from plasma cof patients treated with staphylokinase. The derivatives can also be substituted with cysteine modified with PEG to maintain the specific activity and significantly reduce the plasma clearance. They have altered immunogenicity without markedly reducing the specific activity. This sequence has anti-thrombotic, cardiant activity and a fibrinolytic potency in human plasma. The new staphylokinase derivatives are used for treatment of arterial thrombosis, especially myocardial infarction. The present sequence is not shown in the specification, but is derived from the Staphylococcus aureus wild type staphylokinase sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁

variant. This variant has one aminoacid that has been substituted by another aminoacid that reduces the reactivity with monoclonal antibodies and absorption of SakSTAR-specific antibodies from plasma of patients treated with staphylokinase. The derivatives can also be substituted with cysteine modified with PEG to maintain the specific activity and significantly reduce the plasma clearance. They have altered immunogenicity without markedly reducing the specific activity. This sequence has anti-thrombotic, cardiant activity and a fibrinolytic potency in human plasma. The new staphylokinase derivatives are used for treatment of arterial thrombosis, especially myocardial infarction. The compositions can be used in human or veterinary practice.
                                                                                                                                                                                                         e.g.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Staphylokinase derivatives showing a reduced immunogenicity as compared to wild-type staphylokinase are claimed. The derivatives are useful as thrombolytic agents to treat arterial thrombosis and are pref. produced by eliminating at least one of the epitopes indicated in the features table. The epitopes are destroyed by replacing one or more amino acid residues in a charge cluster by an Ala residue. Mutations are introduced using site-directed mutagenesis on wild-type staphylokinase genomic DNA from the S.aureu lysogenic strain SakSTAR. The present sequence is a specific example of a staphylokinase derivative according to the invention; the sequence does not appear in the specification but can be generat from the wild-type staphylokinase sequence using the description giv in Table 1 of the disclosure.

This variant has one aminoacid that has been substituted by another aminoacid that reduces the reactivity with monoclonal antibodies and absorption of SakSTAR-specific antibodies from plasma of patients treated with staphylokinase. The derivatives can also be substituted with cysteine modified with PEG to maintain the specific activity and significantly reduce the plasma clearance. They have altered immunogenicity without markedly reducing the specific activity. This sequence has anti-thrombotic, cardiant activity and a fibrinolytic potency in human plasma. The new staphylokinase derivatives are used for treatment of arterial thrombosis, especially myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The compositions can be used in human or veterinary practice.

Note: The present sequence is not shown in the specification, but is derived from the Staphylococcus aureus wild type staphylokinase sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Staphylokinase derivatives with reduced immunogenicity, used e.g. treatment of arterial thrombosis % \left\{ 1\right\} =\left\{ 1\right\}

R;Sako, T; Funchida, N.

Ryslako, T; Funchida, N.

Ryslitle: Nucleotide sequence of the staphylokinase gene from Staphylococcus aureus.

A;Reference number: A00995; MUID:84069795

A;Accession: A00995

A;Accession: A00995

A;Molecule type: DNA

A;Residues: 1-163 <SAK>

A;Cross-references: GB:X00127; NID:947425; PIDN:CAA24957.1; PID:9758303

C;Comment: Although it has no intrinsic proteolytic activity, this secreted protein is ructure of plasminogen is thought to expose the plasmin active site.

C;Comment: The designation of staphylokinase as synonomous with Staphylococcal aureus
                                                                                                                                                                                                                                       밁
